

Infusion Pump VET-PRO 2000

NEW

The VET-PRO 2000 multi-functional infusion pump has been designed to combine high levels of safety and performance together with very simple and reliable operation.

The VET-PRO 2000 is a light and compact pump, employing advanced technology for maximum user-friendliness and performance. Because the unit only weighs 760g it can be safely fitted to most popular cage doors with the use of the cage bracket.

The VET-PRO 2000 offers 6 distinct programs: Continuous, T.P.N., Intermittent, PCA, 25 Steps and Sinusoidal.

The VET-PRO 2000 is equipped with a Li-Ion rechargeable battery (with no memory effect, unlike NI-Cad) which ensures continuous operation. In fact, at a rate of 125ml/hr the unit would operate for a total of 20 hours off one full charge. Recharge time is only 4 hours and you can use the unit while it's charging off the AC supply.

The pump incorporates both active and passive safety features and can be configured to fit individual requirements, giving it a true multi-task capability. It is suitable for delivering intravenous fluids, drugs, TPN solutions and blood and can be used in both arterial and venous applications. The infusion is suitable for epidural, subcutaneous and IV applications. The VET-PRO 2000 is also ideal for slow or sinusoidal infusions of anti-cancer drugs.

Cage bracket included

Features

High level of accuracy and excellent linearity even at low delivery rates. Titration allows delivery rate to be adjusted while program is operating. Pump provides choice of entering either a delivery rate or a delivery time for an infusion. Pump is equipped with graphic LCD display featuring instructions for step-by-step data setting. Supplied with storage case. One Year Warranty.
