

Covidien Animal Health Polysorb™ - Strength and Security When it's Needed Most

Polysorb™ is an absorbable multifilament suture, composed of LACTOMER™ glycolide/lactide copolymer, which is a synthetic polyester composed of glycolide and lactide (derived from glycolic and lactic acids).

Polysorb™ sutures are prepared by coating the suture with a mixture of a caprolactone/glycolide copolymer and calcium stearoyl lactylate. Polysorb™ sutures are coloured violet to increase visibility and are also available undyed.

Common uses for Polysorb™ on animals are ligatures, body wall, subcutaneous, G.I. and urogenital.

Features and Benefits

- Excellent Strength during the critical wound healing period
- Excellent handling, knot tying and security
- Strongest braided absorbable suture available
- Strength at 80% after 2 weeks
- Three-week tensile strength, 56-70 day absorption

Available Needle Types: Blunt Point, Blunt Taper Point, Conventional Cutting, Cutting, Diamond Point, Non-Needle Products, Premium Reverse Cutting, Premium Spatula, Reverse Cutting, Spatula, Taper Point, Tapercutting, X-Cosmetic Cutting.
